

HARROW INTERNATIONAL SCHOOL
IT Architecture, Security & Safeguarding Specification

Target: IT Director & Data Protection Officer
System: Harrow AI Hub Portal
Compliance: PDPA / FERPA / Google Workspace Edu

1. SYSTEM ARCHITECTURE & DATA BOUNDARY

1. Harrow AI Hub (Web Portal)

- Internal Directory & Catalogue Index
- 90-Day Quality & Policy Governance
- Stores NO student records or PII

→ Direct Link →

2. Google Gemini Education (Enterprise)

- Authenticated via @harrowschool.ac.th
- Enterprise Data Protection Active
- Zero model training on school data

Core Architectural Principle: The Harrow AI Hub functions strictly as a **Directory and Governance Index**. It does not ingest, proxy, or store staff AI conversations or student data. Clicking "Launch Gem" routes directly to the teacher's official Google Workspace environment.

2. SECURITY, PRIVACY & COMPLIANCE MATRIX

Area	Specification & Security Control	Status
AI Data Privacy	Generative AI inference occurs inside Google Gemini Education. Google's Enterprise agreement guarantees prompt data is never utilised to train public foundation models .	Compliant
Student PII / Records	Zero student records or personally identifiable information (PII) are stored on the Hub. Only system prompt guidelines, department links, and tool metadata exist.	Zero PII Risk
Safeguarding & Policy Drift	Automated 90-Day Review Cycles flag any Gem whose underlying policy links (e.g. Safeguarding handbook, trip policies) require re-verification.	Governed
Role-Based Access (RBAC)	4-tier permission model: Staff (View/Launch/Suggest), Dept Editor, Dept Lead (Approve/Review), and Admin (Full Governance).	Enforced

3. TECHNICAL INTEGRATION: IT REQUIREMENTS

- Google Workspace Single Sign-On (SSO):** Create an OAuth 2.0 Web Application Client ID restricted to the @harrowschool.ac.th domain. User emails map automatically to department roles.
- Internal DNS / Subdomain Routing:** Assign an internal CNAME record (e.g., ai.harrowschool.ac.th or hub.harrowschool.ac.th) pointing to the secure HTTPS hosting destination.
- Hosting & Database:** Host as a static single-page application with an enterprise cloud database (Supabase / Firebase / Cloud Run) residing within Harrow's Google Cloud project.

4. TOTAL FINANCIAL IMPACT & OPERATIONAL OVERHEAD

Component	Cost	Operational Impact on IT
AI Inference / Token Billing	£0.00 / \$0.00	Zero API billing; runs on existing Gemini Education licences.
Hosting / Infrastructure	£0.00 – Free	Zero server maintenance (Serverless static deployment).
Day-to-Day Maintenance	£0.00	Managed entirely by Department Leads & Academic staff.
